Mr. Adam Burzynski

Novazym Polska

Ref.: Reference

19. April 2009

My cooperation with the company Novazym Polska has started in the year 2007. Novazym Polska develops products for molecular biology application.

A wide range of different DNA-polymerases and Polymerase-Kits are used by standard in our lab since 2007. The development of the DNA-extraction Kit in 2008, brought Novazym Polska to new heights and prime success. The Extraction Kit is based on the magnetic-beads technology, which allows the extraction of high-grade purified DNA-Fragments. Using this superior method, we were able to extract DNA-Fragments of different sizes with a quite superior level of purity.

The high quality at reasonably low costs is the main reason why this technology is a great alternative to other products on the market.

The superb quality standard and the competitive prices make Novazym Polska a very attractive partner and by adding their continuous development of products and superior customer services, Novazym Polska additionally becomes irreplaceable in the field of Biotechnology.

Best wishes for Novazym Polska

Paul Grzesik
